

Powering DP World's Low Carbon Truck Programme

Trusted HVO expertise from a FORS Gold accredited national fuel supplier

For over a century, **New Era Energy** has been a leader in fuel, oil and lubricant supply – supporting thousands of UK businesses with reliable, efficient and future-ready energy solutions.

As one of the UK's largest bulk fuel suppliers, we offer nationwide delivery of **500 - 38,000 litres** on our modern, **FORS Gold** accredited fleet. Our investment in advanced tanker technology gives customers real-time vehicle tracking and instant digital delivery notes, ensuring full transparency and a seamless service from start to finish.

We don't just supply HVO – we run our own tanker fleet on it. This reduces emissions during your deliveries and demonstrates our commitment to cleaner operations, lower maintenance needs and long-term sustainability leadership.

New Era Energy specialises in **bulk fuel deliveries** into on-site storage, helping operators control consumption, streamline

fleet efficiency and reduce overall fuel costs. For companies without existing infrastructure, we offer temporary and permanent fuel tanks to support fast, compliant onboarding into DP World's **Low Carbon Truck Programme** – allowing you to immediately access the commercial and environmental benefits of switching to HVO.

Our HVO is produced from Class II feedstocks (Used Cooking Oil), ensuring full **ISCC compliance** and robust sustainability credentials. At the end of each quarter, we provide a **ZEMO Renewable Fuel Declaration**, enabling you to demonstrate verified CO₂ savings and feedstock traceability to your customers. Switching to HVO delivers significant Scope 1 reductions across your fleet and contributes to **Scope 3 emissions reductions** within your wider supply chain.

Here to support your transition
