

ENERGY TRANSITION INVESTMENT EQUIPMENT ELECTRIFICATION

LONDON GATEWAY

Equipment electrification is a key decarbonisation pillar for DP World Ports & Terminals in the UK. ETC funds are used to cover the difference in cost between traditional fossil fuel-powered units, and their electric or alternative equivalent.

Electric straddle carriers

2024 8 purchased
2025 12 planned

LED replacement luminaries

2018-2027
High Masts

Electric forklifts

2023 - 2024
5 Purchased

Vehicle replacement programme

2022 - 2025
Entire vehicle fleet transitioned from Diesel to Electric.

Infrastructure

Funding also covers charging points and infrastructure for all units.

**Decarbonisation Pillar
Equipment
Electrification**

**Implementation
2022 – Ongoing**

“London Gateway’s new berth 4 is the world’s first all-electric berth, including all vehicles, quay cranes, straddle carriers and automated stacking cranes.”
